VPN for Chromebooks

Webpage: Cisco Anyconnect VPN for Chromebooks

Cisco AnyConnect on Google Chromebook requirements
- Chrome OS 43 or later. Stability and feature enhancements are available in Chrome OS 45.
- AnyConnect on Google Chromebook cannot be used from a standalone Chrome browser on another platform.
- For all current Chromebooks, AnyConnect for Android is officially supported and strongly recommended for the optimal AnyConnect experience on ChromeOS. The native ChromeOS client is intended only for legacy Chromebooks incapable of running Android applications

Install or Upgrade AnyConnect on Google Chrome OS

Step 1   On your Chrome device, go to the Chrome Web Store Cisco AnyConnect page.

Step 2   Select **Add to Chrome** or **Update**.
Launch App will be shown if you already have the latest version of Cisco AnyConnect on your device.

Configure and Connect AnyConnect on Google Chrome OS

Step 1   Open the AnyConnect app to configure an AnyConnect VPN connection entry:
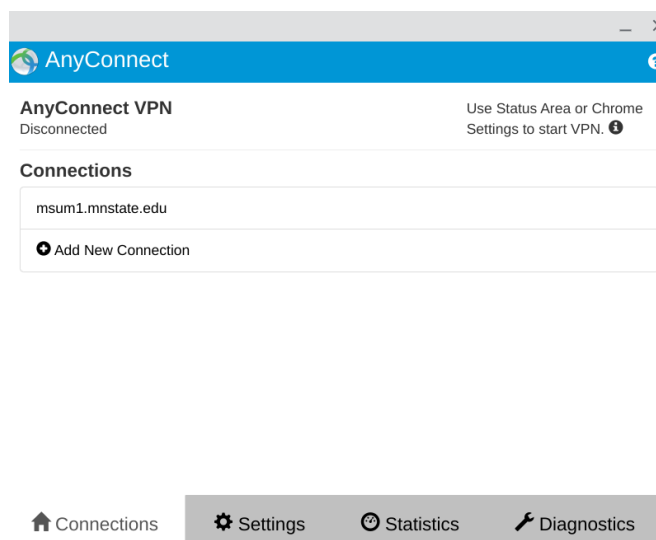

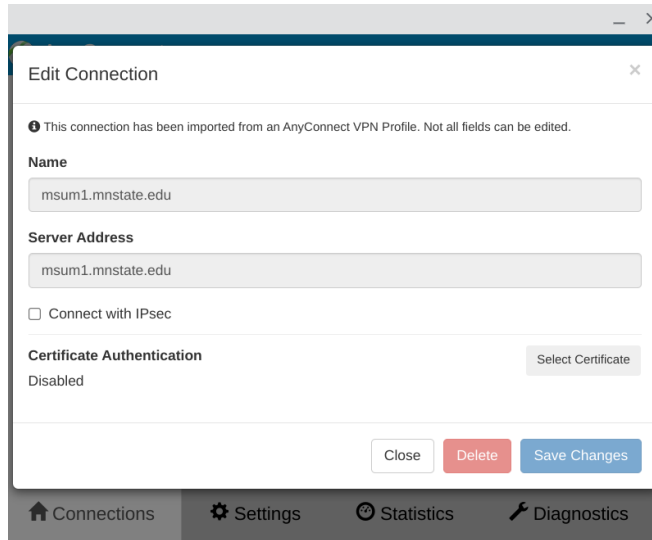

Step 2   Choose the **Connections** tab in the AnyConnect app.
You will see connection entries listed if they were previously configured.
Click **Add New Connection**.

Step 3   Add a new connection entry:

- **Name** field: msum1.mnstate.edu
- **Server Address** field: msum1.mnstate.edu
- **Connect with IPsec**: leave unchecked
- **Select Certificate:** leave as is, this doesn't need to be configured
- Click **Save Changes**.

Step 4   Establish a VPN connection:

- Click in the Chrome Status Area in the lower right corner of your screen, then click in the Private Network area labeled VPN
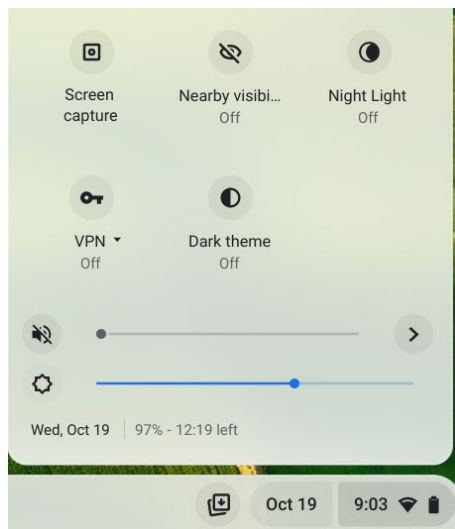

- Choose the connection entry that you created "msum1.mnstate.edu"

The login screen will open, enter the following:
- Group: MSUM
- Enter your starid and password.
- Click Submit

- To view the connection, click in the Chrome Status Area in the lower right corner of your screen and you will notice that "VPN" is on. If you click on the icon it will show what you are connected to.
- This is also where you can disconnect from VPN when you are done
