Topic: OneDrive Changes with StarID Conversion

During the transition to StarID the URL to each user’s OneDrive folder will be slightly modified. This will cause all links to documents housed on OneDrive to be broken. Below is an example of how the URL to the main OneDrive folder will change.

Part of this ID is also included in any individual documents that are shared. Thus any links to individual documents (sent via email, put into D2L, etc.) will be broken. There are ways to remedy this.

- Within OneDrive, the document can be “re-shared” to the necessary recipient(s). This will resend an email with the new link to those with whom the document is shared.
- For documents referenced via a link within D2L as an example, simply update the link to the new OneDrive location.
In addition, the person who the document has been shared with can log into OneDrive and click the “Shared With Me” option on the left navigation bar. This will still reveal the documents shared with you.
