

Topic: Instructional Design Wizard

The Instructional Design Wizard helps you create a basic outline or blueprint for your course.

The Wizard helps you:

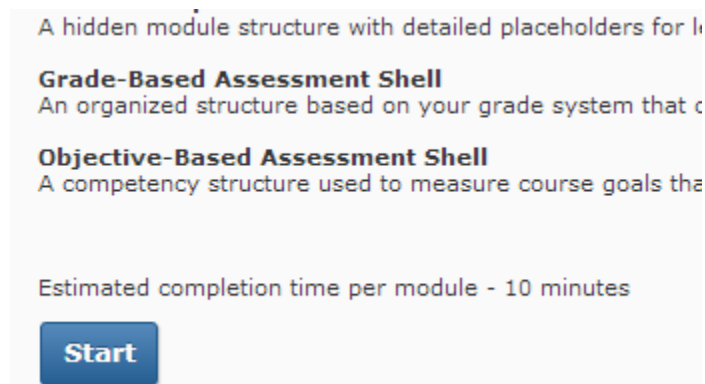

- Define Learning Goals
- Choose Assessment Activities
- Organize your GradeBook
- Define Module Objectives

As you go through the design wizard, it creates placeholders from the course builder and reviews design strategies. Click **Course Admin** in the top nav of your course, **Instructional Design Wizard** is located under **Site Resources**.

Running The Wizard

To run the Design Wizard, click **Start** on the Instructional Design Wizard page.

After you start the wizard, there will be a page with a sidebar showing what step you're on in the Wizard. Read the instructions from the Wizard, and follow the steps it gives you.

Knowing what modules, course goals, competencies, and learning objectives before you use the wizard is a good first step.

Follow the step-by-step wizard, and you will get:

Course Blueprint – A Hidden module structure with detailed placeholders for learning activities.

Grade-Based Assessment Shell – An organized structure based on your grade system that categorizes your assessments.

Objective-Based Assessment Shell – A competency structure used to measure course goals that consist of competencies and learning objectives.
