

## Topic: Embedding Webpages

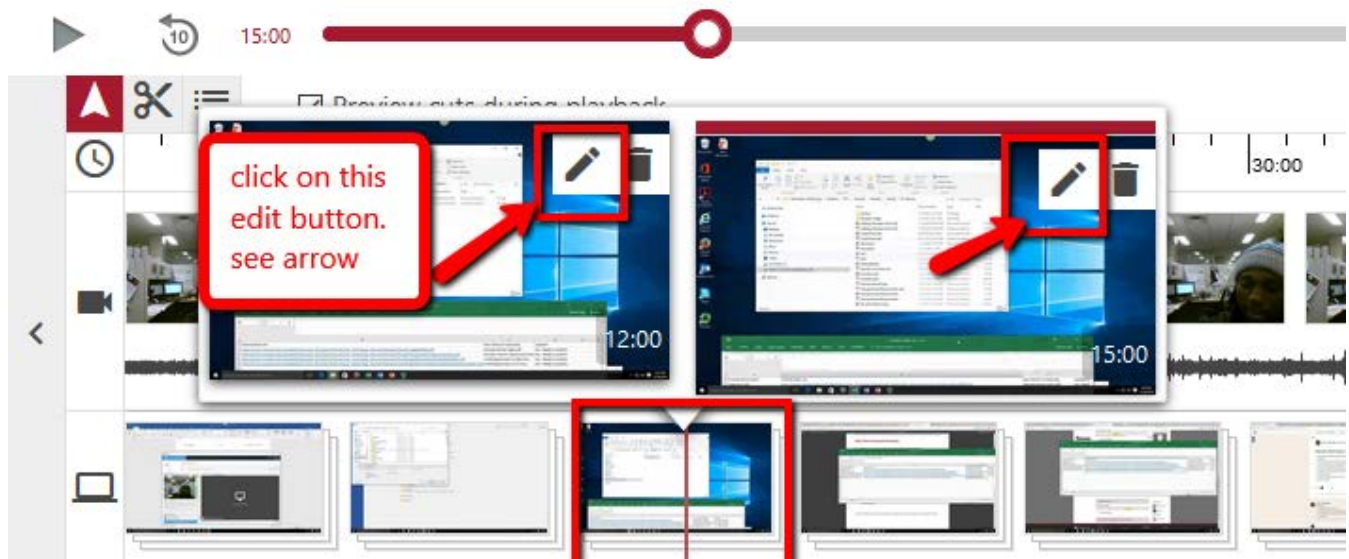

In Panopto, you can embed live webpages in your videos to allow viewers to browse a website you have mentioned for them to view during the presentation. This embedded website will open in a new tab in your video, and you can click links and view content just as in any other browser. To get back to your video, just switch tabs and press play to continue.

1. Locate to your Panopto video and click edit

 Settings  Share  Edit  Stats  Delete

2. Select **Click to edit** in any of your timeline slides or events. Choose the one you wish to add a webpage link to.

3. Once you click **Click to edit**, the Edit table of content window opens. Here, you can adjust time and add URL for embedding website. **See the image on the next page.**

Link   
Links are useful for incorporating quizzes into your video or for just pointing to a helpful web page. When you add a link to your video, the video will pause at this position and viewers will see the linked web page.
